*This pdf might be well worth a study, and a lot better than other. It really is simplistic but excitement inside the fifty percent in the book. Its been printed in an exceedingly straightforward way which is just after i finished reading this ebook through which really modified me, modify the way i believe.

At the edge of an abrupt bluff may be placed two or three Camperdown Elms or other bold weeping trees. Such kinds as love moisture, like the Willows and Alders may be effectively disposed by planting in similar clumps along the water s edge or in low places. Where it is desirable to plant trees along the sides of long garden walks and avenues, for shade, scattering them along irregularly, allowing some complete breaks here and there, will produce a better effect than to make formal lines with the trees at uniform distances apart. There is a striking illustration of this in the strong contrast afforded between the irregularly wooded north drives in Hyde Park, London, where along the sides for miles the trees are arranged in scattered groups, and similar avenues in other parks with formal lines of trees at their sides. The same idea is true generally of trees to be planted along the boundaries of large grounds. They will create a much better effect if grouped openly, as in figure 36, than if set, as is often done, in a straight Fig. 36.--PLANTING ON BOUNDARIES AND MOUNDS. line. It is seldom indeed the case, anywhere outside of narrow stieets, that formal lines might not well give way to informal scattering clusters. Throughout the grounds, open groups of large trees may jut out from heavy marginal plantations, or occupy places by themselves surrounded...
