

System Modelling and Optimization

Filesize: 4 MB

Reviews

This type of publication is every thing and helped me seeking ahead and much more. It usually fails to charge too much. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Juliet Mertz)

SYSTEM MODELLING AND OPTIMIZATION

Berlin Springer Springer. Taschenbuch. Book Condition: Neu. 244x170x mm. This item is printed on demand - Print on Demand Titel. Neuware - Mathematical modelling and optimization of PVC powder blending process for development of multilevel, optimized process control system.- An economic approach for optimum long-term plant mix choice.- An algorithm for getting a minimum cut-set of a graph.- Optimal design of a remote heating network.- Computational complexity of some semiinfinite programming methods.- The calculation of manpower for aircraft ground service.- Discontinuous adaptive control of non minimum phase linear plants.- Optimal control of the storage power plant system Gosau.- Stochastic control in urban traffic.- Throughput optimization of packet communication networks.- Performance analysis of data link and communication device control procedures in distributed Micro/Mini computer systems.- Optimal control methods for power system operation.- Models and methods for estimating an origin-destination trip matrix from network data.- Optimal control of age-structured populations.- Skew-symmetric matrices, staircase functions and theorems of the alternative.- Stabilization of the secant method via quasi-newton approach.- Assignment problems: Recent solution methods and applications.- Optimal control as a tool for solving the stationary Euler equation with periodic boundary conditions.- Optimization problems for two-stage process of resource allocation.- Balanced realisations for infinite-dimensional discrete-time systems.- Nonlinear parameter estimation by global optimization: Comparison of local search methods in respiratory system modelling.- The 'BENCHMARK' chronological simulation model: A new tool for better understanding the economic and physical behaviour of electrical generating systems.- An algorithm in constrained optimization.- An efficient algorithm for the optimal operation of a cascade reactor.- Evolutionary method in discrete programming.- Environmental systems modelling with respect to the future.- On the connections between mathematical programming and discrete optimal control.- Exploration of non renewable resources a dynamic approach.- Dynamic and stochastic optimization of transport networks.- Simulation of biomedical systems.- Stability of semilinear systems in Hilbert..
